

Electrical Compatibility List

The PV modules on this list have been verified for electrical compatibility with Enecsys Micro inverters over the cell temperature range of -20 to +75 degrees C.

This document is intended as a means of reference and is not an exclusive list of compatible modules.

For applications outside of this temperature range, the system designer should verify that the module voltage and/or current would not exceed the micro inverter model's nameplate ratings under all expected environmental conditions. The module specification sheet contains all of the necessary module information to make this determination.

Mechanical Compatibility

The modules on this list are NOT verified for mechanical compatibility with Enecsys Micro inverters.

To ensure mechanical compatibility, be sure to order the correct connector type for both micro inverter and PV module from your distributor.

CAUTION

Be aware that inclusion on this list indicates PV module electrical compatibility, but does not guarantee mechanical compatibility of the PV module connectors.
